

modified its Sewer Use Ordinance in October 2000 to clarify the enforcement actions and communication protocol that will be used to address private property issues related to inflow and infiltration.

4.2.2 Present Conditions

As part of the I/I reduction program, USFOS is using a computer database to monitor and collect information on the collection system. Every time a repair is made or a line replaced the data is entered into the computer building a history of the system. The information gathered allows the City to look at trends to isolate sections of the sewer system with problems and take the required corrective action.

4.2.3 Capacity Management, Operation and Maintenance (CMOM)

Region 4 of the EPA is implementing a program to require municipal wastewater systems to eliminate Sanitary Sewer Overflows (SSO) by the year 2011. Therefore, it
